PENTA Engineering Celebrates 40 Years of Engineering Excellence

ST. LOUIS, MO — July 2026 — PENTA Engineering Corporation proudly celebrates its 40th anniversary this year, marking four decades of delivering innovative consulting, engineering, and EPC/EPCM solutions to heavy industry clients around the world.

Founded in July 1986 by five engineers with a shared vision of providing specialized engineering services and exceptional client support, PENTA has grown from a small startup into an internationally recognized engineering firm serving cement, lime, mining and metals, industrial minerals, bulk material handling, and emerging low-carbon materials industries.

Over the past 40 years, PENTA has successfully completed thousands of projects across six continents, helping clients plan, design, expand, modernize, and optimize their operations. What began as a firm focused primarily on the cement industry has evolved into a multidisciplinary organization with expertise spanning the entire project lifecycle.

"Reaching 40 years is a remarkable milestone for any company," said Subhash Mohan, Chairman and one of the Founders. "Our success has always been built on the expertise of our people, the trust of our clients, and our commitment to solving complex industrial challenges. We are grateful for the relationships we have built over the years and excited about the opportunities ahead."

Today, PENTA operates through three complementary divisions: PENTA Engineering Company, PEC Consulting Group, and PENTA Industrial Corporation, providing services that support projects from concept to completion. The company is headquartered in St. Louis, Missouri and maintains offices in Atlanta, Georgia, Tucson, Arizona and Mumbai, India allowing it to support clients throughout North America and around the globe.

Throughout its history, PENTA has remained committed to helping clients navigate changing market conditions, emerging technologies, and evolving environmental requirements. In recent years, the company has expanded its support of decarbonization initiatives, supplementary cementitious materials (SCMs), alternative fuels, industrial modernization, and circular economy projects that are helping shape the future of heavy industry.

While much has changed since 1986, PENTA's core philosophy remains the same: delivering practical, client-focused solutions grounded in technical excellence.

As the company celebrates its 40th anniversary, PENTA recognizes the employees, clients, partners, and industry organizations that have contributed to its success and looks forward to continuing its tradition of engineering excellence for decades to come.

About PENTA Engineering Corporation

Founded in 1986 and headquartered in St. Louis, Missouri, PENTA Engineering Corporation is an international consulting, engineering and EPC/ECPM firm specializing in heavy industrial markets. Through its divisions—PENTA Engineering Company, PEC Consulting Group, and PENTA Industrial Corporation—the company provides consulting, engineering, and EPC/ECPM services for clients in the cement, lime, mining and metals, industrial minerals, bulk materials handling, and related industries.
